Curriculum Coverage Annotation — Human Evaluation Sheet (0–10 score)

Instructions: Each item pairs a skill demanded in job postings with one learning outcome (CLO) from an ITC (Institute of Technology of Cambodia) course. Judge from the text alone: **how well does this course outcome teach this skill?** The course each outcome belongs to is shown in the last column for context. A glossary of technical terms is on the last page.

Score 0–10: **0** = not taught here · **5** = related / foundation, but not this skill itself · **10** = fully teaches this exact skill.

200 pairs · annotator: _____ · date: _____

#	Market Skill	Course Learning Outcome	Score (0–10) — circle one	Note	Course

193	**data security**	Secure Coding Practices	0 1 2 3 4 5 6 7 8 9 10		Cybersecurity
194	**information assurance**	Secure Data Storage	0 1 2 3 4 5 6 7 8 9 10		Cybersecurity
195	**scripting**	Modular Programming	0 1 2 3 4 5 6 7 8 9 10		C++ Programming
196	**continuous learning**	Classification Algorithms	0 1 2 3 4 5 6 7 8 9 10		Introduction to AI
197	**networking**	Network Administration	0 1 2 3 4 5 6 7 8 9 10		System Administration
198	**system administration**	Systems Administration	0 1 2 3 4 5 6 7 8 9 10		System Administration
199	**program management**	Application Services Management	0 1 2 3 4 5 6 7 8 9 10		System Administration
200	**cloud computing**	System Configuration and Management	0 1 2 3 4 5 6 7 8 9 10		System Administration

Blind sheet: cosine score, band, and job-demand are hidden to prevent priming (kept in the master file). Mapping (optional): 0–3 = No · 4–6 = Partly · 7–10 = Yes.

Glossary — technical terms used in the Market Skill column

Reference only. If a skill is clearly unrelated to the course outcome, a low score (0–2) is the expected answer.

agile	iterative software project-management method (sprints, stand-ups)
angular	Google's framework for building web front-ends in TypeScript
aws / **azure** / **s3**	Amazon and Microsoft cloud platforms; S3 is AWS's file-storage service
cism	Certified Information Security Manager — a security-management certification
db2	IBM's relational database system
devops	practices combining software development and IT operations (automated build/deploy)
docker / **kubernetes** / **containerization**	packaging apps into portable containers; Kubernetes manages many containers
emr	Electronic Medical Records software (or Amazon EMR, a big-data service)
etl	Extract-Transform-Load — moving and cleaning data into a database/warehouse
git	version-control system for tracking source-code changes
group policy	Windows tool for centrally enforcing settings across many computers
hive	Apache Hive — SQL-like querying over big data stored in Hadoop
infrastructure as code	managing servers/networks through code (e.g. Terraform) instead of manual setup
itil	IT Infrastructure Library — best-practice framework for running IT services
kerberos	network authentication protocol (used in Windows Active Directory)
mongodb	a document (NoSQL) database
mvc	Model-View-Controller — a software architecture pattern for applications
pl/sql	Oracle's procedural programming language built on SQL
plc	Programmable Logic Controller — industrial automation hardware
pytorch	Python library for deep learning / neural networks
rest	standard style for web APIs (services communicating over HTTP)
rust	a systems programming language (memory-safe alternative to C/C++)
six sigma	data-driven quality / process-improvement methodology
solidworks	3D CAD software for mechanical design
vmware	virtualization software — running many virtual machines on one physical server
word	Microsoft Word (word processing)
